11. Markings on Left Edge of Extractor Gesichert
12. Description of Front and Rear Sights Front - Lyra in front & knurled ramp. Rear is a "V" notch
13. Magazine Bottom Plug Material and Markings Aluminum, metal, S/N P399 with a stamp of some symbol

Determining values of firearms is always difficult, even when examining a firearm in person. With a "2" below it

Different variations bring different prices based on their rarity. The condition of the firearm is extremely important, and unfortunately, very subjective. Many good books are available on firearm values, such as "The Blue Book". They are updated annually, and are also helpful in identification of the various model variations. As with any firearm, the true value is what you, personally, can get a buyer to agree to pay. The following criteria will help in determining current market value of a particular specimen:

1. Model Variation (Determined Above)
2. Percentage of remaining bluing (i.e. 80%, 95%, etc.)
3. Percentage of remaining straw colored finish on parts such as trigger, disassembly latch, etc.)
4. Condition of Bore.
5. Condition of Grips.
6. All matching serial numbers. Most small parts will carry last two digits of serial number.
7. Correct matching magazine(s) with matching serial numbers.
8. Any accessories such as holster, stock, loading/takedown tool, capture papers, etc.

Using these criteria, describe the condition of your Luger as objectively as possible:
